Exno 13 Demonstrate network forensics using PCAPx-Ray Tool

Aim:

To Perform network forensics by analysis a PCAP file using the PCAPx-Ray tool to identify network protocols, suspicious activities, communication patterns, and transferred files

Procedure:

→ Open a web browser navigate to the PCAPx-Ray website.
→ Select a sample PCAP file from your computer.
→ Click upload and wait for the analysis to complete
→ Observe the dashboard for total packets, protocols and source and destination IP address
→ Analyse the Protocol distribution such as TCP, UDP HTTP, HTTPS, DNS and ICMP
→ generate and save the analysis report if the option is available

Result:

Thus, network forensics was performed successfully using the PCAP X-Ray tool, and network Protocol, communication pattern, transferred files and suspicious activities were analyzed

Problems Output Debug Console Terminal Ports

```
PS D:\12a> python server.py
Server is waiting for connection...
```

Explorer

13

my_ping.py

Welcome my_ping.py

my_ping.py > ...

```
1  import socket
2  import time
3  host = input("Enter destination IP: ")
4  for i in range(4):
5      start = time.time()
6      try:
7          socket.gethostbyname(host)
8          end = time.time()
9
10         print("Reply from", host, "time =", round((end - start)
11
12     except:
13         print("Request timed out")
14     time.sleep(1)
```

Problems Output Terminal

powershell

```
PS D:\13> python my_ping.py
Enter destination IP: 8.8.8.8
Reply from 8.8.8.8 time = 61.0 ms
Reply from 8.8.8.8 time = 0.0 ms
Reply from 8.8.8.8 time = 0.0 ms
Reply from 8.8.8.8 time = 0.0 ms
PS D:\13>
