Exno:15

Analyze Web Server logs using webalizer.

Aim

To analyze web server log using webalizer and generate statics about website traffic, visitors, requests and band width usage.

Procedure.

→ Install and configure the webalizer tool on the System.
→ Locate the webserver log file to be analyzed.
→ run webalizer to process the web server logs.
→ Open the generated HTML report in a web browser
→ Analyze visitor activity and traffic patterns using the graphs and tables.
→ Save or review the generated report.

Completed

Result:

Thus, webalizer was used to analyze webserver logs files successfully and statistical reports showing web site traffic, visitor requests and band width usage were generated.
