01/09/2025 Develop a Customized Ping Command to test the Server Connectivity

AIM:

To develope a customized Ping command to test the server connectivity b/w a client and a server by sending ICMP Echo Request Packets and displaying the response time, Packets statistics, and server reachability status.

Procedure:

→ Install Python 3.10 or later and code editor as VS code.
→ Create a Python file named Ping.py.
→ Import required modules subprocess and platform.
→ Accept the host name and IP from the user.
→ Detect the OS using the platform module.
→ Execute the Ping command with
  → Ping -n 4 <host> for windows.
  → Ping -c 4 <host> for linux/macos
→ use the subprocess.run() function execute the Ping command and capture the output.
→ Display the Ping result, including response time and Packet statistic
→ check the return code of the command to determine whether the server is reachable
→ Display "Server status - reachable" if the Ping is successfull. other wise display "Server status - unreachable".

Result

The customized Ping Program was executed successfully. it checked the connectivity to the specified server and displayed whether the server is reachable or unreachable along with the Ping response details.
